Certificate

This is to certify that the work contained in the project report entitled "Ant-Pandora's box", submitted by Group 07 to the Indian Institute of Technology Mandi, for the course IC 201P - Design Practicum, is a record of bonafide research works carried out by them under our direct supervision and guidance.

We are grateful to IIT Mandi, for offering a course where we were given the freedom to explore various fields of engineering and build whatever we wanted. We would like to thank our mentors, Dr. Anil Kishan and Dr. Aniruddha Chakraborty, for guiding us throughout the whole course, all the while offering us valuable mentorship and support. We would also like to extend our gratitude to the central workshop engineers, especially Rakesh sir, who helped us through every stage in the fabrication process, and taught us a great deal about how a product is actually manufactured. Lastly, our fellow batchmate, Dharma who helped us with finalising our mechanism and deciding components and explained to us certain electrical concepts that were extremely helpful during the fabrication process.

Abstract

Medicinal non adherence is a very prevalent problem in the world. Only in the United States, over 190 million people do not take their medicines at their prescribed timings. And 70% of this non-adherence has to do with behavioural issues of the patient, that include procrastination or forgetfulness.[1] Not just behavioural issues, many patients do not take their prescribed medicines on time because they need a caretaker, or are dependent on someone else to administer their medicinal dosage. This has caused the American healthcare industry, a loss of over 125,000 deaths and 105 billion dollars each year. [2]

To solve this problem, we are building a pill box, with an automatic timer and dispenser, that will ring an alarm at the time the medicine needs to be taken and give out the exact number of pills, depending on the required dosage. The pillbox is also connected with a mobile app where the user can enter the timings, and then the doses will be administered accordingly. This makes the patients independant and less prone to forgetting to take their medicines, and is overall very beneficial to the world's healthcare industries.

Introduction

1) Background of the problem

One thing every healthcare stakeholder agrees on is that a patient's adherence to his or her drug regimen can reduce costs and improve the quality of life. But drugmakers and providers alike struggle to find the best tools, words, and technologies that will improve adherence rates among patients with chronic diseases. Hence we found a solution to the over abundantly prevalent problem of medicinal non adherence, in the form of an automatic pill dispenser box, that will give out medicines to patients at the right time, once inputted.

2) Scope of the problem

The problem of medicinal non adherence is prevalent across

A. Across various age groups

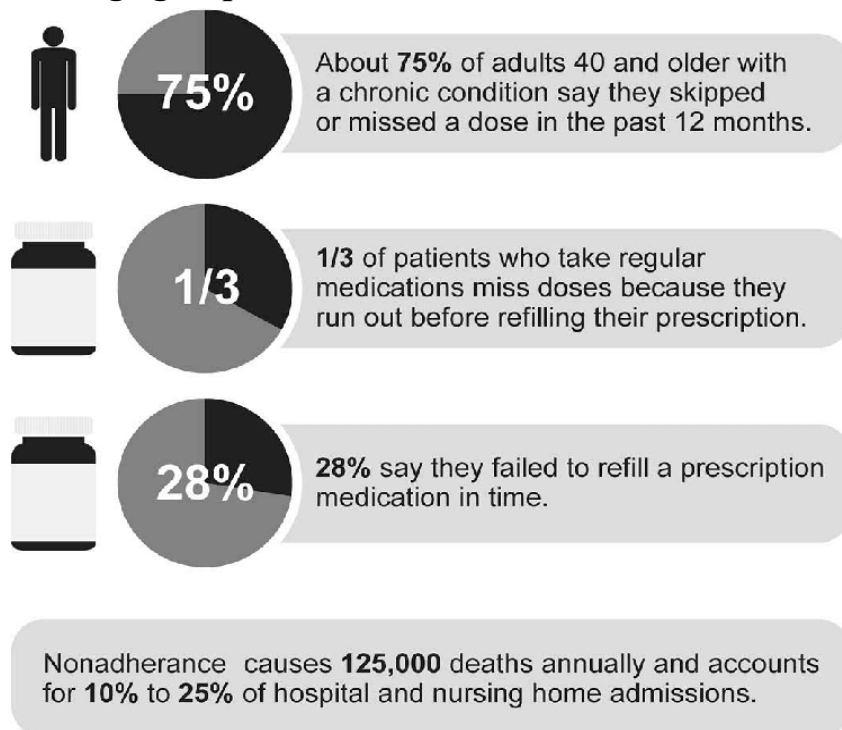

Fig. 1. Costs and consequences of medication nonadherence [3]

B. Multiple regions across the world

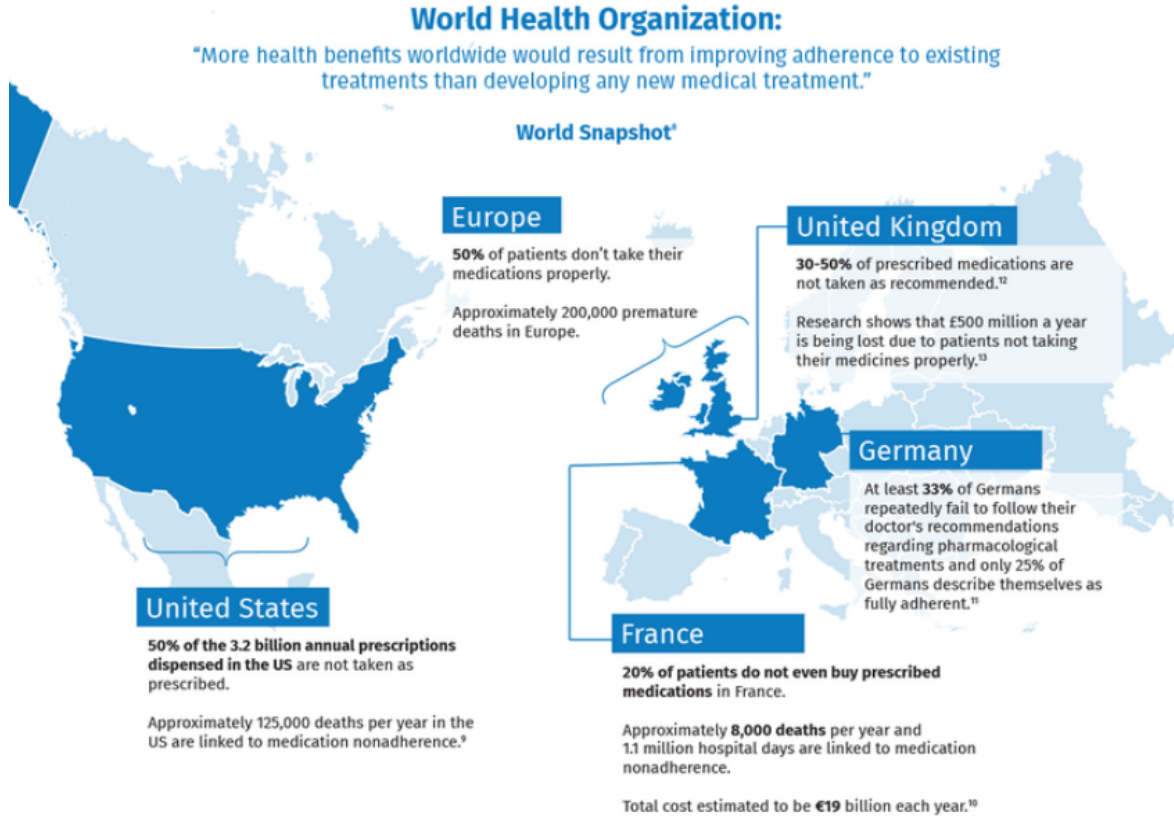

Fig.2. Medicine Non-Adherence data across multiple regions in the world[3]

C. Different types of patients

Fig. 3. Medicine Non-Adherence data in different types of patients [4]

3) Design philosophy used in this report

Definition: A pill dispenser box that gives off medicines at the inputted time

Users: For people who forget to take their prescriptions on time either due to behavioural issues, or the absence of a caretaker

Purpose: To help people stay healthier, and save the losses incurred by the healthcare industries

Differentiation: The available solutions in the market are basic pill containers, and the automated ones are too costly

Value: It will help in saving millions of lives annually and also save billions of dollars of losses incurred by healthcare industries

Goals: To achieve an overall healthier population

4) Problem statement

The prevalent problem of medicinal non adherence, and the absence of an automated pill dispenser in the market.

5) Beneficiaries

- People, who in general forget to take their medicines, due to personal behavioural issues.
- Old or physically incapable people who need the help of caretakers at home
- Patients in hospitals who need the help of nurses to take multiple medicines throughout the day
- Same mechanism can be extended to make a pet feeder when the pet's owners are not at home.

6) Organisation of this project

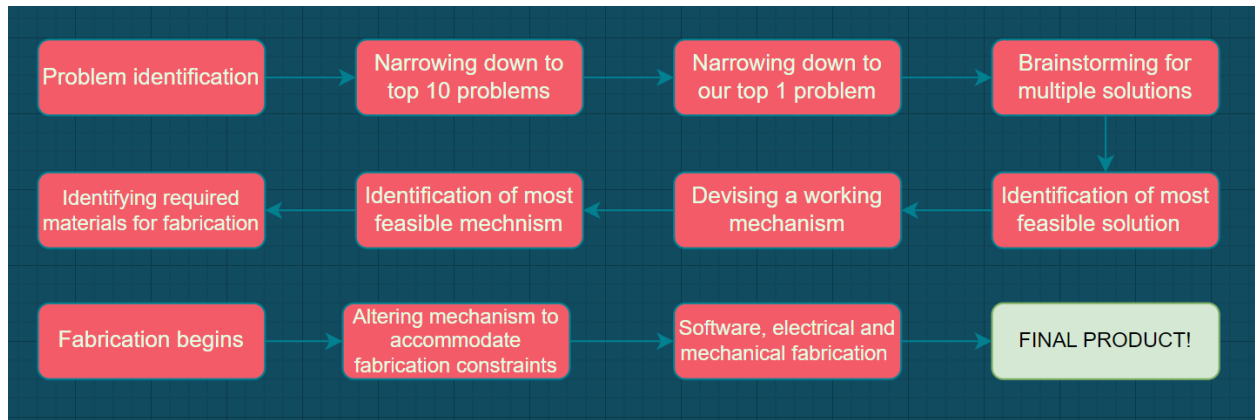

Fig. 4. Organisation of project

7) Origin of the name “Anti-Pandora’s box”

In Greek mythology, there was once a curious girl named Pandora, who was born with the gift of curiosity. She was gifted a box by Zeus, the Greek god of the cosmos, and was told to never open it. But her curiosity got the better of her, and she opened the box, and upon opening it, the box released all kinds of diseases, sorrows and ailments into the world. And our box, we believe, will help contain the diseases prevalent in this world, hence, the name, “Anti-Pandora’s box”.

Chapter 2

Market Research

1. Existing alternatives to current problem

| Sr. no. | Product | Drawback |
|---------|--|--|
| 1 | <p>Manual pill storage container</p>  <p>Fig. 5. Manual Pill Storage Container [5]</p> | <ol style="list-style-type: none"> 1. Pills are not stored in a vacuum seal container and they can get oxidised and be prone to expiry sooner. 2. No alarm system 3. No dispensing system 4. Small size of container |
| 2 | <p>Manual pill storage container with an alarm</p>  <p>Fig. 6. Manual Pill Storage Container with an alarm clock [6]</p> | <ol style="list-style-type: none"> 1. Pills are not stored in a vacuum sealed container 2. Small size of container 3. No dispensing system 4. Cannot differentiate between dispensed medicines |

| | | |
|---|--|--|
| 3 | <p>Manual pill dispenser with an alarm</p>  <p>Fig. 7. Manual Pill Dispenser with an alarm [7]</p> | <ol style="list-style-type: none"> 1. Medicines are not stored in a vacuum sealed enclosure. 2. Different medicines are in contact with each other. 3. Cost is approximately Rs.60,00 |
|---|--|--|

Table. 1. Existing alternatives to current problem

2. Overcoming these problems

- a. In the current model, strips of the pills can be inserted, which remain closed until the alarm is hit and the pill is dispensed out.
- b. The anti-pandora's box gives out the medicine at the inputted time.
- c. Reduced cost (Under 7000 Rs with improved actuator)
- d. Low power Consumption

Chapter 3

Conceptual Design and methodology

100 to 10 to 1

Highlighted problems signify our top 10

| Serial number | Problem |
|---------------|--|
| 1 | Waiting at salon |
| 2 | Road construction takes too long |
| 3 | Mental healthcare is expensive |
| 3 | Water tables running low |
| 4 | traffic in cities |
| 5 | Bike riding in winters |
| 6 | Shortage of car parking space |
| 7 | Food spoils quickly |
| 8 | Slow charging of devices |
| 9 | Poor internet connection in hilly areas |
| 10 | leakage in underground pipes |
| 11 | Overpopulation |
| 12 | Addiction to Social Media |
| 13 | Cleanliness at public places |
| 14 | Low quality food packaging |
| 15 | Phone battery running out at public place |
| 16 | Shortage of clean water |
| 17 | Increasing prices of fuels |
| 18 | Pollution due to vehicles |
| 19 | Poor facilities at Govt. Banks |
| 20 | Personal data security |
| 21 | Cooking problems for bachelors |
| 22 | Proper house construction planning |
| 23 | Snow on roads during winter |
| 24 | Dirty rivers and lakes |
| 25 | Poor sewer system |
| 26 | Call from unknown numbers on mobile phones |
| 27 | Being on hold while calling customer care |
| 28 | Extra charge for shopping bags |

| | |
|----|---|
| 29 | Blisters from new shoes |
| 30 | Power socket far from bed |
| 31 | Water tank full alert/alarm |
| 32 | sometimes unable to hear alarm sound |
| 33 | delaying the work for 5 minutes |
| 34 | time doesn't match for hangout with friends and making new friends |
| 35 | concentrating on too much work and end up doing nothing |
| 36 | Leakage in water fitting |
| 37 | proper health/life insurance planning |
| 38 | hidden charges on various platforms |
| 39 | no dustbin available in trains |
| 40 | Flight tickets are expensive |
| 41 | Trains lack cleanliness |
| 42 | Original certificates can be prone to being lost/damaged |
| 43 | Water clogging on roads in monsoons |
| 44 | Long queues in public places |
| 45 | Fire accidents |
| 46 | Internet services down |
| 47 | Natural calamities being unpredictable |
| 48 | Too many ads on youtube/spotify |
| 49 | Unable to water houseplants when away from home |
| 50 | Fibre services not available |
| 51 | Items with harmful chemicals being sold by big companies |
| 52 | Crowd in public transport |
| 53 | Added preservatives in food are harmful for health |
| 54 | Clean drinking water |
| 55 | Huge quantity of sea water, but its not drinkable |
| 56 | Food has high calories |
| 57 | Hand dryer (with minimum cost) not available in hostels |
| 58 | Required contact/directories not present on mandi's website |
| 59 | Colder buildings, warmer outside |
| 60 | Online overall detailed map/tour/navigation not available |
| 61 | no notification to prof when disconnected from net in online class |
| 62 | Waste segregation is still manual |
| 63 | Resource management for basic stuff present in room android application |
| 64 | More advanced cooking machine not available |
| 65 | More flexible sockets/extensions |
| 66 | Candles are not reusable generally |

| | |
|-----|--|
| 67 | Special Scissors for cutting food |
| 68 | IIT Mandi's wifi disconnects suddenly |
| 69 | Technology creating disparities in social and economic setup |
| 70 | Usage of plastic (including large and small usage) |
| 71 | Instant water heater |
| 72 | Food wastage at mess/restaurants |
| 73 | Food delivery while travelling |
| 74 | Uber/ola services aren't available in Hilly regions |
| 75 | Gas leakage detector |
| 76 | Forest fire detector |
| 77 | gas remaining in gas cylinder marker |
| 78 | long mess lines |
| 79 | Buses are only available in the evening to reach campus |
| 80 | Low connectivity to Mandi- only buses are available |
| 81 | one remote for multiple devices not available |
| 82 | Heavy loads on truck causes them to topple in hilly terrain |
| 83 | little things like keys etc get lost |
| 84 | Old people forget to take medicines on time |
| 85 | multiple alarms don't help in waking up |
| 86 | mirror should be there at blind turn specially for hilly areas |
| 87 | Overspeeding of vehicles in hilly regions |
| 88 | Too many ott platforms, it's hard to keep track of subscriptions |
| 89 | entry into railway station based on QR code checking |
| 90 | problem in driving in fog |
| 91 | adding a safe distance detector in car |
| 92 | unavailability of buses from North and South campus and vice versa |
| 93 | Late deliveries in college (amazon/flipkart) |
| 94 | Customised apparel recommendations |
| 95 | Fast fashion generates a lot of waste |
| 96 | Academic stress in competitive institutions |
| 97 | Miscellaneous problems in hostels |
| 98 | usage of solar power to power water filter |
| 99 | kids size outgrows clothes size |
| 100 | Meets get muted when in a call |

Table. 2. 100 problems

Identifying the TOP 10

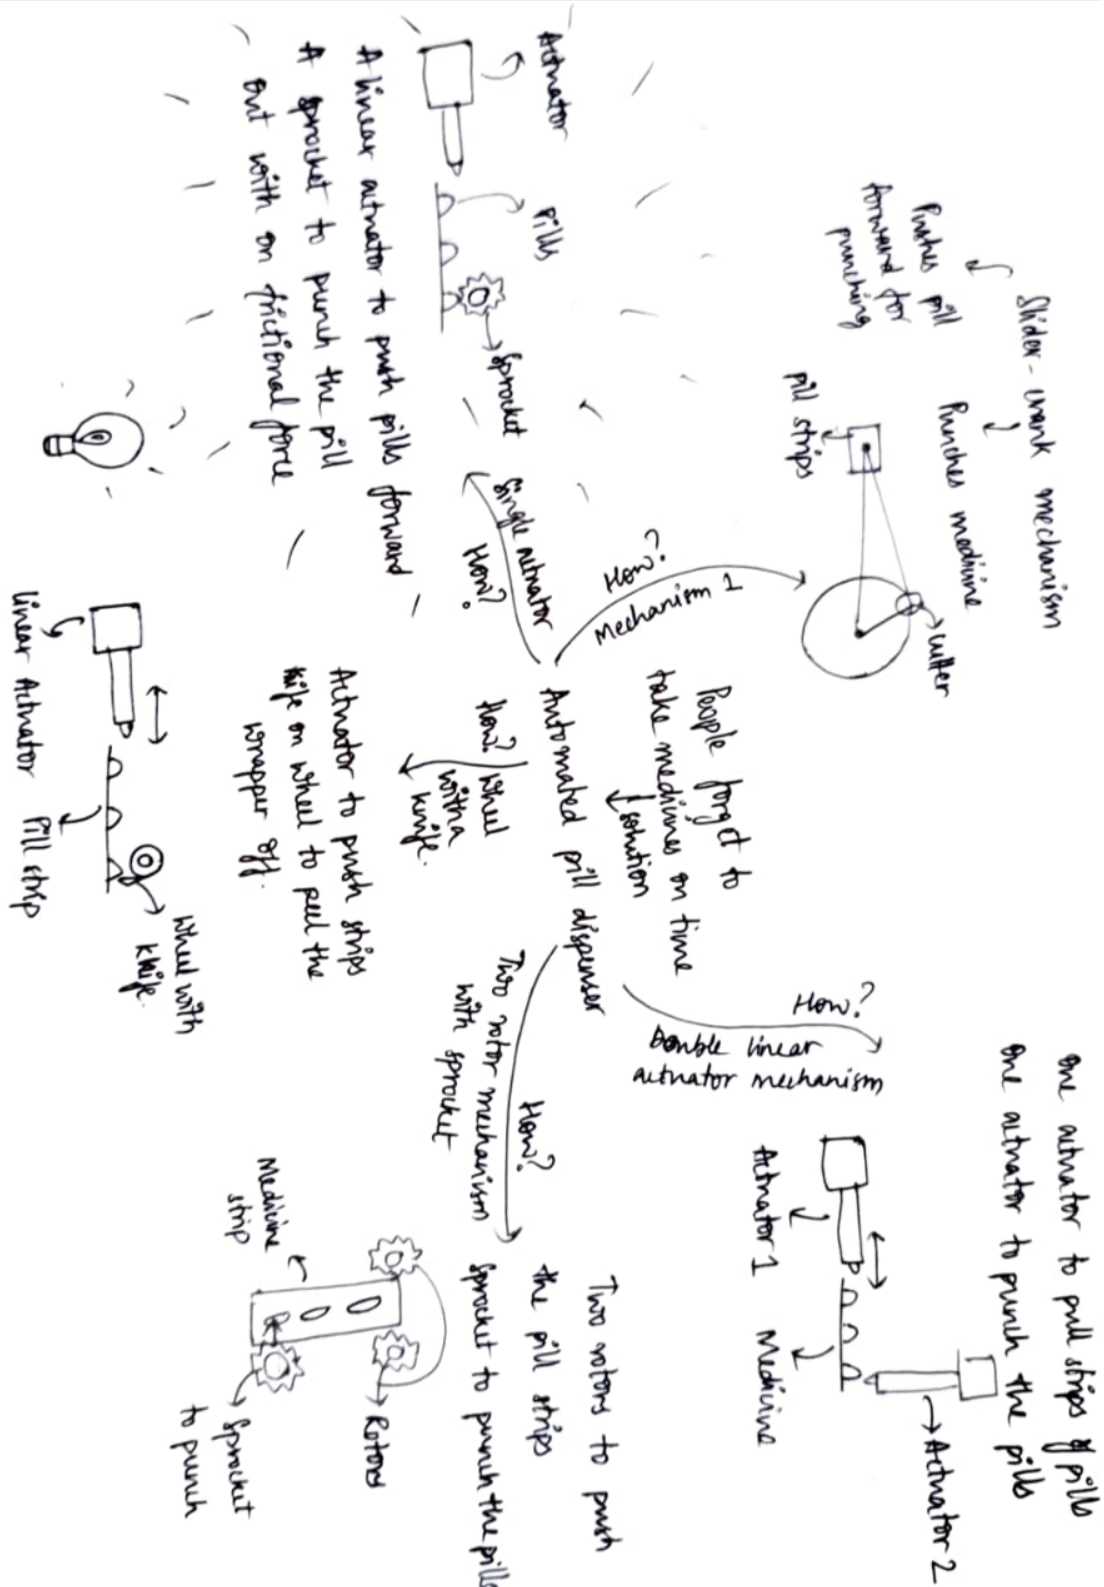

| Serial number | Problem identified |
|---------------|--|
| 1 | Special Scissors for cutting food |
| 2 | Old people forget to take medicines on time |
| 3 | Mirror should be there at blind turn specially for hilly areas |
| 4 | Problem in driving in fog |
| 5 | Customised apparel recommendations |
| 6 | Usage of solar power to power water filter |
| 7 | Kids size outgrows clothes size |
| 8 | Phone battery running out at public place |
| 9 | Addiction to Social Media |
| 10 | Mental healthcare is expensive |

Table. 3. Top 10 problems

Our ~~MILLION~~ \$ 13K IDEA

People forget to take their medicines on time

1. Brainstorming and Idea generation for solution mechanism

2. Selection of the most viable ideas proposed.

It was concluded after intensive brainstorming sessions that we would finalise the mechanism with one linear actuator and one sprocket to dispense the medicine. The function of the linear actuator would be to push the pill moulds towards the sprocket, where it would be unwrapped with frictional force applied from the spokes of the sprocket.

3. Decision matrix

Points were given from 0-10, with 0 being least viable and 10 being most viable

| Solution ideas | Cost | Feasi-bility | Availa-bility | Total | Remarks |
|--------------------------------------|-------------|---------------------|----------------------|--------------|---|
| Slider crank mechanism | 7 | 6 | 6 | 19 | Hard to make a system stable with too many moving parts |
| Double linear actuator | 3 | 9 | 9 | 21 | Was getting too costly due to non availability of a small actuator |
| Two rotor mechanism with sprocket | 10 | 4 | 9 | 23 | Two rotors may not be able to push the medicine strips for ward, and it may get stuck due to friction |
| Wheel with a knife mechanism | 10 | 4 | 10 | 24 | Low clearance for the cutting action of wrapper to take place, so there were chances for |
| Single linear actuator with sprocket | 8 | 9 | 9 | 26 | Most viable fabrication option identified |

Table. 4. Decision Matrix

Embodiment and Detailed Design

1. Product architecture

Fig. 8. Flow chart of working prototype

2. System-level design -

- The power supply is given to the raspberry pi through a 300V adapter.
- The Raspberry Pi is connected to the relay and alarm clock with jumper wires.
- The relay helps in activating the back and forth movement of the linear actuator.
- The linear actuator moves along the guideways, and into the pill mould housing, pushing the bottom most pill mould forward under the sprocket.
- The sprocket is fixed into place on a shaft that is held by the shaft holders.
- The sprocket and shaft holders are all placed with the help of nut and bolt fastening.
- When the pill mould moves under the sprocket, the medicine is dispensed just by the frictional force from the sprocket, and pops out into the collecting tray.

3. Design configuration

| Part | Dimensions (in mm) | Material | Manufacturing process |
|-------------------|--------------------------------------|-----------------------|-----------------------|
| Linear actuator | 350*60*60 when unexpanded | Aluminium | NA-Outsourced |
| Raspberry pi3 | 63.5*55.88*20.32 | Electrical components | NA-Outsourced |

| Collecting tray | Complex, dimensions given in Table 6 | Aluminium | Metal cutting and shaping |

Table. 5. Design Configuration

4. Detailed design

- **Electrical/Electronics aspect:**

Raspberry Pi 3: It is used as a microcontroller in this project. It is powered with a 5V, 2.5A AC-to-DC adapter.

Alarm clock: Speakers (5V 2A) are synchronised with a switch and are powered directly from Rpi with an USB cable. OX cable is used for Input output control and it is also connected directly With Rpi.

Linear Actuator: Rated voltage and current that our actuator consumes are 24vdc and 5.5A respectively that's why it is being powered with an 230v ac to 24v DC adapter with external supply. Actuator uses a DC motor inside it so to reverse the motion of actuator we need to reverse the power terminals that's why Relay is used.

Relay: It contains 4 modules out of which only 2 are being used one with forward motion and other with reverse motion according to the program that is their inside Rpi.

- **Software part:**

We have used the below code in the RPi to run the linear actuator

```
1  # Importing the required libraries.
2  import RPi.GPIO as GPIO
3  from time import sleep
4  import vlc
5  import multiprocessing
6
7  # Set warnings as False.
8  GPIO.setwarnings(False)
9  GPIO.setmode(GPIO.BCM)
10
11 # Reading the alarm clock audio.
12 vlc_instance = vlc.Instance("--input-repeat=999")
13 player = vlc_instance.media_player_new()
14 song = vlc_instance.media_new("/home/pi/Music/audio.mp3")
15
16 player.set_media(song)
17 player.audio_set_volume(100)
18 player.play()
19
20 # GPIO pins for actuator positive and negative terminals
21 r2 = 40
22 r1 = 38
23
24 # Defining functions for setting up and working of the GPIO pins for the actuator
25 def set_input_pin(pin):
26     GPIO.setup(pin, GPIO.IN)

81         break

```

- **Mechanical Aspects:**

Fig. 9. Isometric Projection of the prototype

Fig. 10. 3-dimensional view of the prototype

5. Results and Discussion

The electrical aspects of the project were fulfilled using the minimum resources, i.e, a Raspberry Pi, relay, Linear actuator and alarm clock. For the software component, we had run a code to activate the back and forth motion of the linear actuator in sync with the alarm clock. For the mechanical structure we used easily available components in the central workshop, like wood, aluminium and acrylic sheets. This helped in greatly reducing the weight of our model, as we didn't use a lot of heavy metals in fabrication.

The angle between the bottom edge and the side edge is 150.7°.</p> <p>Isometric View: Shows a 3D perspective of the tray.</p> <p>Material: Aluminium</p> |
| 8 | Metal layer of pill mould |  <p>Technical drawing of a metal layer of pill mould. The drawing includes three views: Top View, Front View, and Isometric View. Dimensions are provided for each view. The material is specified as Steel.</p> <p>Top View: Shows a rectangular metal layer with a width of 130.00 and a height of 35.00. It contains three circular holes.</p> <p>Front View: Shows a rectangular metal layer with a width of 130.00 and a height of 2.00.</p> <p>Isometric View: Shows a 3D perspective of the metal layer.</p> <p>Material: Steel</p> |

Table. 7. Mechanical Components in the prototype

3. Manufacturing Process description:

| Sr. no. | Part name | Manufacturing process description |
|---------|-------------------|---|
| 1 | Shaft | 1. Metal cutting to obtain shaft of required length |
| 2 | Shaft holders | 1. Laser machining to obtain desired shape 2. Drilling in the drilling machine to drill holes at the base for the screws |
| 3 | Actuator guideway | 1. Metal cutting for obtaining the guideway of required length and cutting the hole at the centre for the medicine to pop out |
| 4 | Pill mould | 1. Wood cutting, to give the desired shape 2. Hand drilling to insert screws to attach it to the metal base layer. 3. Adhesive bonding to acrylic sheet using super glue. |
| 5 | Pill mould casing | 1. Laser machining to obtain sheets of desired dimensions. 2. Drilling using the drill machine to insert screws, for it to rest on the base of the pill dispenser. |
| 6 | Collecting tray | 1. Metal cutting and shaping to obtain the desired shape. 2. Hand drilled holes for inserting nuts and bolts for fastening onto the base of the box. |

Table. 8. Manufacturing Process Description

4. Assembly

- The aluminium guideway, shaft holding acrylic sheets, and linear actuator are all fastened onto the base with nuts and bolts.
- The shaft is fitted onto the shaft holders using circular support bearings.
- The pill mould housing and pill moulds rest freely atop the aluminium guideway.
- The parts of the pill mould housing are attached using adhesive bonding using super glue.

Chapter 6

Concluding remarks

1. Limitations and Challenges:

- **Cost:** The cost of the linear actuator was very high. We could have worked with an actuator of 150 mm stroke length and one that provides 13N force. But due to non availability of such actuators in India, the cost of our model had significantly increased.
- **Large size:** Due to the large size of the linear actuator, we had to size the rest of the model accordingly, making bigger pill moulds, and consequently bigger pill mould casings and sprockets. The size of the whole model could be reduced by 1.5x if we had a smaller actuator.

2. Schedule plan:

| Task name | Assigned | Status | WEEK 1 | WEEK 2 | WEEK 3 | WEEK 4 | WEEK 5 | WEEK 6 | WEEK 7 | WEEK 8 | WEEK 9 | WEEK 10 | WEEK 11 | WEEK 12 | WEEK 13 | WEEK 14 | WEEK 15 | WEEK 16 | WEEK 17 | WEEK 18 | WEEK 19 | WEEK 20 | WEEK 21 | WEEK 22 | WEEK 23 | WEEK 24 | WEEK 25 | WEEK 26 | WEEK 27 | WEEK 28 | WEEK 29 | WEEK 30 |
|--|----------------------------|--------|--------|--------|--------|--------|--------|--------|--------|--------|--------|---------|---------|---------|---------|---------|---------|---------|---------|---------|---------|---------|---------|---------|---------|---------|---------|---------|---------|---------|---------|---------|
| Milestone 1 | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| Problem identification | | Done | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| Making a list of 100 problems | All | Done | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| Finalising top 10 problems | All | Done | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| Finalising our top 1 problem | All | Done | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| Milestone 2 | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| Solution identification | | Done | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| Devising solutions to the problem through brainstorming sessions | All | Done | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| Modification of all proposed solutions | All | Done | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| Identifying most viable solution | All | Done | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| Milestone 3 | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| Building over the solution | | Done | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |

| Open house poster | Nishritha, Khushi | Done | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| Final report | Nishritha, Khushi | Done | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |

Table. 9. Schedule Plan

Full report can be accessed at:

[+ DP Group 7- Grantt chart](#)

Contribution:

| Sr. no. | Member name | Roll number | Contribution |
|---------|---------------------|-------------|--|
| 1 | Nishritha Boligarla | B20283 | Idea generation, CAD models, making of report, documentation |
| 2 | Prateek Raj | B20164 | Idea generation, RPi coding, electrical fabrication |
| 3 | Khushi Ladha | B20013 | Idea generation, making of report, documentation, |
| 4 | Kirsh Kumar | B20295 | Idea generation, RPi coding, mechanical fabrication |
| 5 | Rahul Yadav | B20095 | Idea generation, electrical component fabrication |
| 6 | Mehul Jain | B20300 | Idea generation, overall fabrication, material selection |

Table. 10. Contribution of team members

Overall, all the group members had worked together with good harmony and without any disputes in each stage of product development. Every member provided fruitful contribution and properly executed their task, to the best of their abilities.

Conclusions:

It is in plain sight of the common man of how detrimental the effects of medicinal nonadherence can be. The loss of lives and money in the healthcare industries is massive, and it can all be solved with just a simple pill dispenser. All the components used in our project are easily available, and the manufacturing processes involved are also feasible. It has a very non complex design and is easy to use too. It could be of great help to any patient and the healthcare industries overall.
